

Payment Policy

Synthetic enterprise knowledge-base content for the Enterprise Knowledge & Support Copilot.

Payment failure

If a payment is marked FAILED by the server, the customer may retry using an approved payment method. Before retrying, verify that no successful duplicate transaction exists.

Pending payment

Pending payments must first be checked against gateway and provider reconciliation. Customers should not make repeated payments while the original transaction is unresolved.

Refund eligibility

Successful captured payments may be eligible for refund according to order and refund policy. Eligibility depends on payment state and order status.

Escalation

Duplicate charges, inconsistent provider status, and unresolved settlement discrepancies must be escalated to payments operations.
