

Account and Authentication Product Guide

Synthetic enterprise knowledge-base content for the Enterprise Knowledge & Support Copilot.

Overview

The account service manages customer profiles, login, password reset, multi-factor authentication, and account security controls.

Password reset

Password reset requests use the registered recovery channel. Reset links expire after the configured security window.

Account lock

Repeated failed authentication attempts can temporarily lock an account. Support must verify account ownership before recovery.

Security

Never request or store customer passwords, one-time passwords, recovery codes, or full payment credentials in a support ticket.
