

Order Management Product Guide

Synthetic enterprise knowledge-base content for the Enterprise Knowledge & Support Copilot.

Overview

Order Management coordinates order creation, payment confirmation, inventory reservation, fulfillment, cancellation, and status updates.

Order lifecycle

Typical states are CREATED, PAYMENT_CONFIRMED, PROCESSING, SHIPPED, DELIVERED, and CANCELLED.

Orders should not enter fulfillment when payment is FAILED or remains unresolved beyond the configured reconciliation process.

Cancellation

Customers may request cancellation before shipment. After shipment handoff, cancellation is normally handled through the return workflow.

Support checks

Verify order_id, payment status, fulfillment status, and shipment status before promising cancellation or refund.
