

Payment Troubleshooting Runbook

Synthetic enterprise knowledge-base content for the Enterprise Knowledge & Support Copilot.

Payment failed

Locate payment_id, check server-side status, check provider response code, confirm no successful duplicate transaction exists, advise retry only when failure is definitive, and escalate repeated or systemic failures.

Payment pending

Check gateway status, provider status, callback receipt, and reconciliation status. Do not recommend repeated payment until duplicate-charge risk is ruled out.

Duplicate charge

Do not issue an unverified manual refund. Capture payment IDs, transaction timestamps, provider references, and order details, then escalate to payments operations.
