

Shipping Troubleshooting Runbook

Synthetic enterprise knowledge-base content for the Enterprise Knowledge & Support Copilot.

Tracking not updated

Verify tracking_id and latest carrier event. If a label exists but there is no pickup scan, confirm fulfillment handoff before escalating.

Delivery delayed

Check latest carrier event, promised delivery window, and known carrier exception. Escalate when the case meets applicable support policy.

Failed delivery

Verify carrier reason and customer address information. Never expose internal carrier credentials or operational secrets.
